NEWS RELEASE

July 2006

MC302X Launch.

The MC302X has been designed to provide a compact, cost effective solution for OEM applications.

The unit features two axes, the first of which can be configured in software for either servo (with encoder feedback) or stepper control. The second axis may be either a reference encoder or a stepper axis. The differential line driver stepper outputs can be configured for simulated quadrature encoder outputs to synchronized multiple units. The built-in registration facilities make the MC302X ideal for Flying Shears, Winders, and highspeed Labelers.
